

STATEMENT OF PURPOSE

My name is **Aashritha, Voorakkara** and through my Bachelor of Engineering at Visvesvaraya Technological University, Belgaum, Karnataka, India, I have been thoroughly engrossed in the field of electronics and instrumentation engineering since 2018. This trip has piqued my interest in microelectronics, microsystems, and control systems, therefore motivating me to learn more in these disciplines. For a **Master's in Control, Microsystems, Microelectronics (CMM)**, my application provides me road map to explore further these fascinating fields at the **University of Bremen**.

My intellectual background stems from a solid performance within the Indian educational system. Held by the Council for the Indian School Certificate Examinations, Delhi, India (April 2015 – March 2016), my Class 10th examinations (Indian Certificate of Secondary Education) came out with a **78.66%**. Building on that, the Department of Pre-University Education, Karnataka, India (April 2017 - March 2018) gave me an **87%** on my Class 12th examinations, Pre-University Examination. At Visvesvaraya Technological University (September 2018 – August 2022), I sought a **Bachelor of Engineering in Electronics and Instrumentation Engineering** and kept a **CGPA of 8.17 (equal to a 2.10 on the German grading system)**. Covering disciplines including Engineering Mathematics, Process Control Systems, Digital Image Processing, Electrical Circuit Analysis, and VLSI Design, this program offered a complete education. Also I have cleared my **IELTS exam** with **overall score bands 7.5 (CEFR level C1)**.

Beyond the classroom, I engaged in events that expanded my knowledge and stoked my love of electronics. At B.M.S. College of Engineering, VTU, Bengaluru, India, I **volunteered at a department** during the **National Level Annual Technical Symposium Phase Shift 2019**. This position proved my dedication to academic success and my love of group projects. Working as an **Associate Electronics Design and Analysis Engineer at Boeing India Private Limited, Bangalore, India**, confirmed my practical abilities even further. I helped design and construct digital and analog circuits, conducted thorough testing of electrical components, found and offered fixes for flaws, and My technical background include fundamental expertise in C++, Python, IoT, and oscilloscopes, multimeters, and circuit simulation tools including LTspice, Xpediton, and Multisim.

Strong desire to increase my knowledge and skills in these domains drives my choice to get a Master's degree in Control, Microsystems, Microelectronics (CMM) at the University of Bremen. During my undergraduate studies, where I became enthralled with the topic of Process Control Systems, my interest in control systems started. The intricacy and accuracy demanded in this discipline piqued my interest and stoked my want to learn more. My internship at Boeing also let me work on real-world projects where I saw microsystems and microelectronics used practically. These encounters have confirmed my love of these fields and inspired me to seek advanced education. These classes will provide me the tools I need to participate in creative electrical solutions. Furthermore, the program's emphasis on industry cooperation and useful applications will give me insightful knowledge and experience that will help me personally as well as professionally.

Applying to the University of Bremen appealed to me because of its outstanding academic reputation and strong emphasis on research and practical learning. Ranked among the top 300 universities globally, the University of Bremen's dedication to provide top-notch education is evident in this ranking from QS World University Rankings. The institution presents an interesting learning environment that promotes multicultural understanding with a varied student population and a faculty including top authorities in the subject. The university's great facilities and position in a busy metropolis provide even more attraction. Rich cultural legacy and vibrant economic scene of Bremen offer the perfect setting for my academic and personal development.

Germany is well-known for its excellent educational system and focus on research and invention, hence I would prefer to study there. I want to remain in Germany since the field of education there is much better than that of other countries. I wish to be among the rich German culture, diversity, and good exposure. Germany's significant focus on business partnerships and practical learning makes it the country I wish to study Master's degree in. Immersion in Germany's energetic and cosmopolitan surroundings will help me to develop both personally and professionally. I wish to participate in the dynamic corporate scene of the nation and learn from the finest.

After finishing the CMM program, I hope to be employed in positions including **Microelectronics Design Engineer, Microsystems Engineer, or Control Systems Engineer**. The information and abilities acquired from this program will help me to support creative ideas in the field of electronics and participate to modern initiatives. I want to work where I may take advantage of the dynamic employment market and great focus on research and development of the nation. I am sure the CMM program at the University of Bremen will provide me with the required basis to reach my professional objectives and significantly influence the field of electronics.

I value your giving my application some thought. I'm looking forward a good answer.

Regards,
Aashritha, Voorakkara
