

Motivating Letter

I am Chennai, Tamil Nadu Indian student **Arun Bharadwaz, Vasudevan**. I'm writing to convey my excitement about going **Master of Electronics Engineering-Microsystem Engineering at HS Bremen**. Completing an **IELTS test** with an **overall score of 7.0** (Listening: 7.0, speaking: 7.0, Reading: 6.5, writing: 6.5 has helped me to get ready for this chance). I think this course will help me to enjoy my time in Germany.

At SRM Institute of Science & Technology, where I finished my **Bachelor's degree in Electronics and Computer Engineering**, I earned an **8.55 CGPA (German Grade: 1.87)**. I studied advanced calculus, signals and systems, hardware interfacing and networking extensively during my bachelor's degree. "**CNN Based Object Detection for Visually Impaired People**," my last project, was especially rewarding since it let me put my skills to use designing a system that uses automated voice guidance to provide real-time navigation to visually impaired people.

Ever since I started school, the world of electronics and how it affects our daily life captivate me. During my higher secondary education—where I studied Physics, Chemistry, and Mathematics my passion grew greater. This basis and my work on a project have driven my want to investigate Electronics Engineering-Microsystem Engineering even more. The way this subject combines several different disciplines to address challenging issues particularly appeals to me.

Because of its creative teaching strategies and real-world application emphasis, I really find HS Bremen to be interesting. In a master's program, modern facilities and an interdisciplinary learning environment absolutely meet what I am searching for. Furthermore in line with my learning philosophy and the university's dedication to create a cooperative learning environment whereby students are urged to think critically and cooperate on interesting projects are the notion of engaging with colleagues and experts from different backgrounds excites me especially as I think it will tremendously enhance my educational process. My goal is to combine technical knowledge with useful applications thereby contributing significantly to next-generation electronic systems.

Because of its strong emphasis on applied sciences and stellar reputation in offering a practical, hands-on learning environment, I decided to pursue additional studies at Hochschule Bremen. The university's strong alliances with businesses and research institutes and its emphasis on multidisciplinary cooperation fit exactly my objective of acquiring practical knowledge. Building a successful career in the globalized world of today depends on networking and interacting with different professions, hence HS Bremen's worldwide viewpoint and international environment offer a perfect stage for this. Its position in Bremen, a center of creativity, adds even more attraction.

Germany leads in invention and technology, hence I wish to study there. Aspiring engineers like me find a suitable environment in the nation because of its robust economy and emphasis on research and development. I also like to remain in Germany since the caliber of instruction in my subject is significantly better than in other countries. The rich German culture, diversity, and good exposure will be much awaited. Studying in Germany will assist me to develop personally and professionally. I wish to fully engage myself in a society renowned for its accuracy and efficiency, which exactly complement my professional objectives.

Following program completion, I hope to be working in positions such **Microsystems Engineer, Electronics Design Engineer, or Embedded Systems Engineer**. The knowledge and abilities acquired from this program will enable me to work on innovative technologies and help the sector to grow forward. Working where the engineering sector presents lots of chances for advancement, especially interests me.

Ultimately, I think a major step toward reaching my objectives will be a chance to study at HS Bremen. The program's emphasis on research, together with the university's first-rate resources and encouraging surroundings, make it the ideal venue for me to keep on my study. The possibility to help the field of Electronics Engineering-Microsystem Engineering and have a significant influence excites me.

I value your giving my application some thought.

Arun Bharadwaz, Vasudevan
