

Statement of Purpose

I am **Isha, Sudele**, an Indian student. Every sphere of our life is touched by the discipline of computer science. Modern innovation is mostly driven by computer science from our communication style to how we tackle challenging situations. Studying advanced subjects helps me to contribute to this always changing profession by generating fresh approaches for artificial intelligence, data analysis, software development, and data processing. I so decided to seek the **M.Sc. Program in Computer Science at Saarland University**.

Academic and Professional

I turned up an **84.2% (German Grade: 1.7)**, mark in my 10th grade in 2018. Following that, in 2020 I finished in 12th grade with an **81.6% (German Grade: 1.8)**. Earning a CGPA of **8.71 (German Grade: 1.6)**, Graphic Era Hill University, Dehradun, Uttarakhand, India, is helping me to pursue a **Bachelor of Technology in Computer Science and Engineering**. Aside from this, I worked on a bachelor's project called "**Pet Animal Welfare**," which developed a street animal adoption website utilizing **Django, HTML, CSS**, and machine learning for disease prediction. In the **IELTS test, I scored 7.0 bands**; after completing a course on "**Demystifying Intellectual Property for Research Integrity and Economic Development**" by Delhi Technological University.

I finished a **2-day Blockchain for Beginners** Workshop run by CodroidHub Private Limited. Along with web development technology, my skills include mastery of programming languages including Python, C++, and Java. I also finished a **4-week virtual internship program** under Full Stack Development run by ICT Academy. I learned front-end as well as back-end development over this practice. I also worked on a project applying a street animal adoption system in the real world. These encounters have given me insightful understanding in software development and efficient technology-based problem-solving ability.

Why this Program?

My undergraduate studies in Computer Science and Engineering drew me especially to courses like Mobile Application Development and Full Stack Web Development, therefore sparking my desire to pursue a **Master's in Computer Science**. My enthusiasm in learning more in this sector has been driven by this obsession with intelligent systems and their data analysis capability. The emphasis of this curriculum on artificial intelligence, machine learning, and big data analytics fits very nicely with my goals to acquire a specific knowledge relevant for practical problems. The learning results of the program—expertise in data modeling, algorithm design, and data visualization—will equip me for success in highly sought-after professions like Software Developer or Data Scientist at innovative companies where I can use AI and data science to solve challenging problems and help to advance technology.

Why this University?

Many different elements shaped the choice to attend **Saarland University**. The course of study and the amenities on university really caught my attention. I know the university has great reputation. It not only provides first-rate research tools but also gives its students' personal and professional development tremendous weight. Access to top-notch facilities during my study will significantly affect the caliber of my future work. Designed to equip students for a very competitive professional environment, the curriculum is thorough and closely linked to the sector. Highly talented teachers have painstakingly created and presented the course materials. They have good teaching strategies and a lot of expertise. Furthermore, this provider's educational scheme stresses research-oriented methods and pragmatism above theory-based learning. Attending this university will surely help me to develop professionally.

Why Germany

Germany is regarded for its excellent educational system, hence I want to apply there. Given the field education compared is considerably better than other locations, I wish to remain in Germany. I wish to encounter the German culture, diversity, and good exposure. Germany's great focus on research and practical learning makes it the country I wish to study master's degree from. Studying in Germany will help me develop personally as much as professionally. Germany's rich past, effective public transportation, and dedication to environmental sustainability particularly intrigue me. Germany's excellent educational system and strong support of research and development help me to decide on it for my master's degree

Occupational Objectives

Once I finish my study, my main goal is to land a job as a **Data Scientist or Software Developer** where I can put my expertise to use producing original and effective designs. This degree will equip me with the technical knowledge and interpersonal skills required to succeed in these in-demand professions and help to progress technology.

Conclusion

I am quite hopeful and positive that you would decide in my best advantage. Following a master's degree in your prestigious local university in the field of my interest will help me to reach my professional target.

Yours, Sincerely
Isha, Sudele
