

STATEMENT OF PURPOSE

I am **Isha, Sudele**, an Indian student. Throughout my undergraduate studies in Computer Engineering, my obsession with how machines might learn and solve problems like people has run continuously. This curiosity drives me to create this statement of intent, summarizing my great will to seek a **Master of Science in Computer Science at TU Clausthal**.

Academic and Professional- I turned up an **84.2% (German Grade: 1.7)**, mark in my 10th grade in 2018. Following that, in 2020 I finished in 12th grade with an **81.6% (German Grade: 1.8)**. Earning a CGPA of **8.71 (German Grade: 1.6)**, Graphic Era Hill University, Dehradun, Uttarakhand, India, is helping me to pursue a **Bachelor of Technology in Computer Science and Engineering**. Aside from this, I worked on a bachelor's project called "**Pet Animal Welfare**," which developed a street animal adoption website utilizing **Django, HTML, CSS**, and machine learning for disease prediction. In the **IELTS test, I scored 7.0 bands**; after completing a course on "**Demystifying Intellectual Property for Research Integrity and Economic Development**" by Delhi Technological University.

I finished a **2-day Blockchain for Beginners** Workshop run by CodroidHub Private Limited. Along with web development technology, my skills include mastery of programming languages including Python, C++, and Java. I also finished a **4-week virtual internship program** under Full Stack Development run by ICT Academy. I learned front-end as well as back-end development over this practice. I also worked on a project applying a street animal adoption system in the real world. These encounters have given me insightful understanding in software development and efficient technology-based problem-solving ability

Why this Program- My undergraduate studies in Computer Science and Engineering drew me especially to courses like Mobile Application Development and Full Stack Web Development, therefore sparking my desire to pursue a **Master's in Computer Science**. My enthusiasm in learning more in this sector has been driven by this obsession with intelligent systems and their data analysis capability. The emphasis of this curriculum on artificial intelligence, machine learning, and big data analytics fits very nicely with my goals to acquire a specific knowledge relevant for practical problems. The learning results of the program—expertise in data modeling, algorithm design, and data visualization—will equip me for success in highly sought-after professions like Software Developer or Data Scientist at innovative companies where I can use AI and data science to solve challenging problems and help to advance technology.

Why this University- TU Clausthal is notable for various factors. First of all, TU Clausthal's stellar computer science research reputation fits my intellectual aspirations. Collaborative research centers help to create an environment of invention and inquiry that is absolutely essential for my own growth as a researcher. Second, TU Clausthal's small campus allows me to engage closely with teachers and get tailored attention—a feature I really cherish. At last, the university's emphasis on multidisciplinary learning speaks to me since it helps me to approach computer science from several angles. With its rich history and cultural value, the city of Clausthal-Zellerfeld excites me to live and study so I may widen my horizons outside of the classroom.

Why Germany- Germany is the country I wish to apply for since their educational system is quite well-known for both cost and quality. Since the field of education in Germany is significantly superior to that of other countries, I wish to remain here. I wish to be among the rich German culture, diversity, and good exposure. Germany presents lots of chances for future job and practical experience; hence I decided to major in it. Studying in Germany will help me to develop both personally and professionally. Germany's rich history and cultural value captivate me hence it is a great destination to live and learn. . Germany has the ideal mix of academic brilliance and practical experience; hence I wish to pick it for my master's degree.

Occupation Objectives- After education, my future employment plans call for working in professions like data scientist or software developer. These roles directly relate to the program I wish to study. Where the booming digital sector and focus on research and development support an always learning and innovative culture. This degree will equip me with the technical knowledge and interpersonal skills required to succeed in these in-demand professions and help to progress technology.

Conclusion- Finally, my credentials and background fit exactly the TU Clausthal Computer Science program. The university's great intellectual and research environment excites me to contribute to and gain from. I appreciate your time and careful reading.

Really,
Isha, Sudele
