

Statement of Purpose

I am **Isha, Sudele**, and I have always dreamed of working in the many opportunities inside computer science. I thus apply to the outstanding **TU Darmstadt for the M.Sc. in Computer Science**. Driven by my great interest and love of technology, my academic path has been an ongoing quest of knowledge in computer science.

Academic and Professional - I turned up an **84.2% (German Grade: 1.7)**, mark in my 10th grade in 2018. Following that, in 2020 I finished in 12th grade with an **81.6% (German Grade: 1.8)**. Earning a CGPA of **8.71 (German Grade: 1.6)**, Graphic Era Hill University, Dehradun, Uttarakhand, India, is helping me to pursue a **Bachelor of Technology in Computer Science and Engineering**. Aside from this, I worked on a bachelor's project called "**Pet Animal Welfare**," which developed a street animal adoption website utilizing **Django, HTML, CSS**, and machine learning for disease prediction. In the **IELTS test, I scored 7.0 bands**; after completing a course on "**Demystifying Intellectual Property for Research Integrity and Economic Development**" by Delhi Technological University.

I finished a **2-day Blockchain for Beginners** Workshop run by CodroidHub Private Limited. Along with web development technology, my skills include mastery of programming languages including Python, C++, and Java. I also finished a **4-week virtual internship program** under Full Stack Development run by ICT Academy. I learned front-end as well as back-end development over this practice. I also worked on a project applying a street animal adoption system in the real world. These encounters have given me insightful understanding in software development and efficient technology-based problem-solving ability.

Why this Program- The **TU Darmstadt M.Sc. in Computer Science** offers a special chance where my interests and academic goals cross. By means of its extensive course, the program will afford me the opportunity to investigate advanced computer science subjects including data analysis, artificial intelligence, and software engineering. The courses on Machine Learning and Data Mining especially excite me since they will provide me the tools I need to examine and understand challenging data sets. By means of this program, I will be able to acquire skills necessary for evaluating and resolving practical challenges as well as mastery of methodologies. The integrated viewpoint of the curriculum will introduce me to ideas of system-level thinking, therefore helping me to close the distance between theoretical knowledge and useful implementations.

Why this University- The creative surroundings of **TU Darmstadt**, with its first-rate instructional facilities and research labs furnished with sophisticated computer tools has always captivated me. The university's focus on quality research and critical thinking fits exactly both my academic and career objectives. Joining the active and inclusive community at TU Darmstadt will open my vision to many experiences and viewpoints, therefore extending my horizons. The work being done at the Institute of Computer Science, where innovative research in several spheres of computer science is carried out, especially interests me. I have heard great comments from graduates about the favorable academic environment and research possibilities given. My choice to apply also stems from the research centers and eminent academics of the institution.

Why Germany- Dreaming of studying in Germany has always been present. Germany's world-class educational system and chances for both personal and professional development motivate me to apply there. Since the field of education in Germany is significantly better than in other countries, I aim to remain here. I wish to be among the rich German culture, diversity, and good exposure. Germany's great focus on research and innovation—which will enable me to develop both personally and professionally—helps me to decide on this country for my master's degree. The chance to fully engage myself in German culture—known for its accuracy, efficiency, and rich history—which has so shaped my choice to study here excites me.

Occupational Objectives- Future Objectives and Occupational Aspirations after College, I want to work with multinational companies like **Google, Microsoft, or SAP** leaders in technology and innovation. These businesses lead in finding fresh ideas and improving computer science competencies backed by modern technologies. Combining my business-driven attitude with my computer science research skills, over time I hope to build a tech company developing cutting-edge software solutions to transform the technology sector and produce improved results for companies and people all around.

Conclusion- Finally, my academic performance and work experience support my being a qualified applicant for the TU Darmstadt Master of Science in Computer Science program. By means of this experience, I would acquire the knowledge and skills required not only for my personal development but also for the advancement of technology and enhancement of living conditions for individuals all around. I am most certainly ready to meet these challenges, appreciate and grow from them, and join the esteemed academic community TU Darmstadt presents.

I value your giving my application some thought.

Sincerely,
Isha, Sudele
