

Motivated Letter

Born on September 13, 2002 in Gwalior, Madhya Pradesh, I, an Indian citizen, go by **Isha, Sudele**. I'm writing to show the **University of Gottingen's Master of Science in Applied Computer Science program** interests me. My educational path and work experience have convinced me that this program will offer the perfect stage for my development and future goals.

Academic and Professionals

Graphic Era Hill University, Dehradun, Uttarakhand, India, saw me finish my **Bachelor of Technology in Computer Science** and Engineering with an **8.71 CGPA (German Grade: 1.6)**. I participated in several projects throughout my undergraduate studies that gave me a solid basis in computer science. Working on a street animal adoption website using **Django, HTML, CSS**, and machine learning for disease prediction, "**Pet Animal Welfare**" was one of my major projects and included. This research marked a turning point in my academic life since it let me see how creatively technology may be used to address practical issues. Having also **scored 7.0** bands overall on the **IELTS test**, I have proven rather proficient in English.

Apart from my academic success, I have finished various certifications and seminars to expand my expertise. Delhi Technological University sent me a course on "**Demystifying Intellectual Property for Research Integrity and Economic Development**," and CodroidHub Private Limited hosted a **two-day "Blockchain for Beginners"** program. In addition, I gained real-world experience creating web applications by completing a **4-week virtual internship program** in Full Stack Development run by ICT Academy.

Why this Program

Different events during my scholastic path have piqued my curiosity in practical computer science. One such encounter was my participation in the "Pet Animal Welfare" initiative, which underlined the need of technology in enhancing the conditions of street animals. This project motivated me to investigate applied computer science more broadly. Participating in the Full Stack Development internship also let me work on actual projects, so strengthening my ambition to work in this industry. The University of Gottingen's Applied Computer Science program's extensive course appeals especially to me. The curriculum gives a combination of theoretical and practical knowledge, which will help me to have a strong grasp of computer science ideas and their implementations. Modules like "Machine Learning," "Data Analysis," and "Software Engineering"—which fit my career objectives and interests particularly pique my curiosity. These courses will provide me the technical understanding and abilities required to succeed in the field of applied computer science.

Why the University of Gottingen

Prestigious **University of Gottingen** boasts a solid reputation for intellectual excellence. The University of Gottingen comes in among the top universities in the world according to the QS World University Rankings. With more than 31,000 students, the institution has modern facilities, seasoned teachers, and a gorgeous campus right in the middle of Gottingen. Though I do not know anyone personally at the university, I have heard great comments from graduates about the favorable academic environment and research possibilities given. My choice to apply also stems from the research centers and eminent academics of the institution. The work being done at the Institute of Computer Science, where innovative research in several spheres of computer science is carried out, especially interests me. Studying in Gottingen will also give me chances to investigate the rich cultural legacy and active student scene of the city. Gottingen is a perfect location for both intellectual and personal development because of its historic sites, energetic bars, and lovely parks.

Objectives for My Profession

My immediate objective is to land a senior job where I can oversee initiatives using applied computer science to enhance corporate procedures and stimulate creativity. I want to work on creating intelligent systems capable of solving challenging issues and so advancing technology. Long term, I want to be a top applied computer science professional helping to support innovative research and development projects. Either pursuing an academic career or working for a multinational tech business, where I can inspire and guide next generations of computer scientists, I see myself being quite important.

Why Germany

Germany is well-known for its excellent educational system and strong research and innovation concentration; hence I would prefer to study there. Since the field of education in Germany is significantly better than in other countries, I wish to stay here. Experience the rich and varied German culture will help me to see things from a different angle and improve my own development. Thanks to Germany's strong economy and booming IT industry, which presents great chances for networking and job progression, I want to study my master's program there. Studying in Germany will help me acquire the skills and information required to succeed in my field, thus both personally and professionally I wish to progress. Germany's rich cultural legacy—which includes its historic towns, stunning scenery, and world-class museums—makes it the perfect setting for both intellectual and personal development.

Conclusion

Ultimately, I think the University of Gottingen's Master of Science in Applied Computer Science program fits me perfectly both academically and professionally. My academic background, work experience, and love of technology help me to be qualified for this program. Contributing to the active academic community of the institution excites me since it will equip me with the tools and knowledge required to reach my professional aspirations in applied computer science. This curriculum will give me the tools and basis I need to succeed in my next projects, so I am sure.

Really,
Isha, Sudele.
