

Statement of Objective

Jeet Vijay, Bhirud is writing to **FAU Erlangen** to exhibit interest in the **Master of degree in Electromobility-ACES**. My love of sustainable technology and my wish to help the field of electromobility with its best efforts motivate me. On February 25, 2024, I took the **IELTS test and scored 7.5 (C1 level overall.)**. From July 2020 to July 2024 (anticipated), academically I am working on a **Bachelor of Technology in Mechanical Engineering** at the Manipal Institute of Technology, Manipal, and Karnataka, India. Up to the seventh semester, I had a **CGPA of 8.39—equal to a German mark of 1.9**. On my Senior School Certificate Examination (April 2019 – March 2020), I **scored 89.2%**. Before that on my All India Secondary School Examination (April 2017–March 2018), I **scored 90.2%**. These achievements show my will to learn and my aptitude in academics.

I did internships at:

- Upl Limited, from June 5, 2023, until August 4, 2023
- India's GAIL (limited) from July 1, 2022, until July 30, 2022

Along with other extracurricular activities, I obtained multiple certificates, including a course on **Simulation Analysis for Mechanical Engineers and Modeling and Design for Mechanicals Engineers** with Autodesk Fusion 360 on Coursera. I also received honors as **Core Committee Member** for the Manipal Institute of Technology's Human Resource Department. These encounters have given me useful knowledge about the field and more practical ability. Also I have completed my **IELTS test with overall score bands of 7.5**.

Combining intellectual interests with personal experience drives my curiosity in electromobility- ACES. One important event occurred during my internship at UPL Limited, when I helped to use artificial intelligence-based solutions to lower the plant's energy use. This encounter made clear the possibilities of sustainable technologies in practical uses. During my undergraduate studies, learning disciplines such Fluid Mechanics, Turbo Machines, and Automobile Engineering also piqued my interest about electric cars and their influence on the course of transportation. Particularly exciting are the "Electric Powertrains" and "Energy Storage Systems" modules available at FAU Erlangen under the Electromobility-ACES initiative. These courses will provide me with the technical know-how and pragmatic abilities required to shine on the field.

For my graduate studies, I picked Germany because I want to be in a nation leading worldwide in research and innovation—especially in the field of sustainable technology. I wish to expose myself to several points of view and fully embrace German culture—known for its accuracy and efficiency. I wish to take advantage of Germany's renowned affordable and excellent high-quality educational system. Studying in Germany will provide me chances to learn from the finest in the area and experience a rich cultural legacy, thereby helping me grow both personally and professionally. I want to live in a nation leading in green technologies and stressing sustainable development.

My first pick for several very convincing reasons is FAU Erlangen. Ranked in the 201–300 bracket in the Academic Ranking of World Universities in 2021 and gaining 172nd position in the Times Higher Education Ranking in 2022, the university routinely rates highly in worldwide university assessments. These lists tell volumes about its academic quality. Modern buildings and a varied student population define FAU Erlangen. FAU Erlangen's faculty members are authorities in various domains, and the university is in a dynamic city with many of attractions. Erlangen's local employment scene is also strong; firms like Siemens are recruiting graduates of the Electromobility-ACES program. This makes FAU Erlangen the perfect setting for me to advance my education and start my career.

My dream job would be in a position like **sustainable transportation consultant, energy storage specialist, or electric vehicle engineer**. I want to work so that I could help to create environmentally friendly transportation options. The Electromobility-ACES curriculum will equip me with the abilities required to succeed in these positions. Working with businesses like Siemens, who are renowned for their creativity in sustainable technology, especially interests me.

Finally, my strong academic background, practical experience, and love of sustainable technology help me to make me an ideal applicant for the Electromobility-ACES program at FAU Erlangen. Contributing and learning from the rich and dynamic surroundings at FAU Erlangen excites me. The chance to further go over my application excites me; I appreciate your time and thought.

Jeet Vijay, Bhirud
