

Statement of Goals

Meghana, Manjegowda here is writing to say how much **Electronics Engineering-Microsystem Engineering at HS Bremen** piques my curiosity. Having a strong academic background in Electronics and Communication Engineering, reasonable experience from a recent internship, and a strong command of English, I am eager to add to my education and help the industry to grow.

From June 2017 to July 2021, Bangalore University, India, where I pursued a **Bachelor of Engineering in Electronics and Communication Engineering**, India With an impressive **81.37%**, which corresponds to a **German mark of 1.9**, Essential for a good future in Electronics Engineering, this curriculum has given me a strong basis in mechanical engineering science, basic electronics, computer communication networks, signals and systems, embedded systems, and microcontrollers. My **IELTS score of 7.5**, with individual scores of Listening: 8.0, Reading: 8.0, Writing: 6.5 and Speaking: 6.5, clearly shows my English competency in August 2024. This credential emphasizes my language skills and my preparedness to engage in a worldwide academic scene.

Apart from my academic success, I have acquired useful experience by means of an **internship at CYRAAC Services Private Limited, Bangalore, India**, from June 2021 to November 2021. I worked on market research to grasp consumer demands, tastes, and industry trends as well as competition offers and market prospects for sales throughout that time. This practical experience has strengthened my academic knowledge and given me a view of Electronics Engineering's real-world useful applications. Currently employed as a **Consultant - Sales for the same organization**, I find potential leads, schedule meetings to learn about their needs, and present company products. I participate in the negotiating stage as well to conclude deals. Along with I was awarded certificate of participation for **"Poster Presentation Contest"** and attending a Workshop on **'Robotics'**.

My love of developing creative ideas and my goal to become an expert in a fast developing discipline inspire my choice to study Electronics Engineering-Microsystem Engineering. With applications ranging from consumer electronics to medical devices, electronics engineering is leading edge technologically innovative field. Learning advanced microsystem engineering skills would help me contribute to create solutions capable of tackling difficult problems and propel development. During my Bachelor project, **"Personal Trainer Using Artificial Intelligence,"** where I suggested an improved back propagation algorithm for creating a device that acts as a personal workout trainer, my passion in this topic was piqued.

For various reasons, HS Bremen is my chosen university. Especially in the subject of electronics engineering, the university's stellar reputation for research and instruction greatly inspires me. HS Bremen's Electronics Engineering-Microsystem Engineering program guarantees that students are ready to address real-world challenges by providing a thorough curriculum combining academic knowledge with practical experience. Further appealing are the university's cutting-edge buildings, eminent faculty, and cooperative learning environment. Furthermore, HS Bremen's great emphasis on multidisciplinary cooperation fits exactly both my academic and career objectives. For my growth as an electronics engineer, the chance to interact with professionals from several disciplines and collaborate on creative research projects is absolutely essential. The university's strategic position in one of Germany's top industrial areas also offers great chances for internships and industry leader cooperation.

Germany's strong economy, emphasis on invention, and world-class educational system make it the perfect place for me to pursue my Master's degree. Germany's dedication to research and development along with its varied and cosmopolitan environment—which provides a special and fascinating experience for overseas students—have me wanting to study there. Since outdoor education in Germany is significantly better than elsewhere, I wish to remain there. German culture, which is renowned for its rich history, customs, and focus on engineering quality and accuracy, is the one I wish to really engage with. The good exposure and variety Germany presents will enable me to advance both personally and professionally. German way of life encourages efficiency, timeliness, and creativity; I want to live that way. I wish to see Germany's rich cultural scenes, historical sites, and lovely cities. Building a solid professional network and learning about the worldwide employment scene will help me to improve my chances for a career.

After Post graduation, my future employment plans call for positions as **Microsystems Engineer, Electronics Design Engineer, or Research and Development Engineer.** The Electronics Engineering-Microsystem Engineering program will provide me the technical know-how and interpersonal skills required to succeed in these roles. Working will allow me to support the nation's booming electronics sector and gain from its strong engineering and innovation emphasis. The curriculum will equip me with the chance to work on innovative ideas and partner with business leaders, so prepare me for a successful field career.

Ultimately, I have no doubt that HS Bremen's Electronics Engineering-Microsystem Engineering program will equip me with the tools, knowledge, and chances required to reach my professional objectives. The idea of helping the vibrant academic community of the university excites me, and I am ready to offer to the program my special background and viewpoints. I kindly ask the admissions committee overvaluation of my application.

Many thanks for considering me. I see myself joining HS Bremen and starting this academic road that will change my life.

**Yours are real,
Meghana, Manjegowda**
