

Letter of Inspired Motivation

An Introduction - Meghana, Manjegowda here is writing to say how strongly I would like to study the **Master of Science in Sensor Systems Technology at HS Karlsruhe**. Having recently graduated from Bangalore University's Electronics and Communication Engineering program and presently employed as a **Consultant in Sales at CYRAAC Services Private Limited**, I am excited to learn more about sensor systems and help this industry. The next phase of my path to combine my practical expertise with academic background will be this program, which will help me to significantly influence technology.

Academic Background; Internship - From Bangalore University, where I earned **an 81.37%, equivalent to a German mark of 1.9**, I have a **Bachelor of Engineering in Electronics and Communication Engineering**. Among the disciplines in my curriculum were mechanical engineering science, basic electronics, computer communication networks, signals and systems, embedded systems, and microcontrollers. Along with my Secondary School Examination with a **CGPA of 9.2 (German Grade: 1.4)** and my Pre-University Examination with a score of **92.16% (German Grade: 1.3)**, I shone.

Through training courses and internships, I have acquired real-world experience over my academic path. As a **sales intern at CYRAAC Services Private Limited**, I investigated competitor products and conducted market research. This encounter clarified for me the useful uses of my education. I also worked on a Bachelor's project called "**Personal Trainer Using Artificial Intelligence**," where I suggested a modified backpropagation technique to create a gadget serving as a personal workout trainer. These encounters have given me a good basis in both theoretical understanding and pragmatic ability.

Complementing my academic background, I have also obtained various technological qualifications. These comprise a Certificate of Participation for visiting a Workshop on "**Robotics**" run by Radius Technologies and a Certificate of Participation for a **Poster Presentation Contest** run by University Visvesvaraya College of Engineering. My **IELTS score of 7.5 (CEFR Level: C1)** highlights even more my English competency.

Why M.Sc. in Sensor Systems Technology? Different experiences lead me to be interested in sensor systems technology. The courses on embedded systems and microcontrollers captivated me during my Bachelor's degree. From environmental monitoring to healthcare, I came to see how sensor technologies may transform daily life. My internship introduced me to the possibilities and actual difficulties in this industry. The Master's program at HS Karlsruhe will let me investigate courses vital for my professional aspirations, Sensor Signal Processing and Sensor Networks. The practical tasks and real-world applications this curriculum provides especially pique my curiosity. I think this course will provide me with the technical know-how and interpersonal skills required to succeed in my line of work.

Germany especially? Germany's stellar reputation for top-notch education—especially in engineering and technology—allows me to wish to study there. Germany is where I wish to stay as the education in my subject is significantly better than that of other countries. I wish to be among the rich German culture, diversity, and good exposure. Germany presents great chances for practical experience and research; hence I want to major in there. Studying in Germany would help me to develop both personally and professionally since it will provide me a worldwide viewpoint and the opportunity to collaborate with all kinds of individuals. I have always found great interest in Germany's rich history and culture; hence I wish to completely absorb it.

Why in HS Karlsruhe? HS Karlsruhe appeals especially to me because of its practical approach to education and solid academic reputation. The university's quality is shown by its standing among Germany's top engineering and technology universities. Modern facilities and a lively student population let HS Karlsruhe create the perfect setting for education and development. Friends who have studied here have given me great comments, which support my choice even more. In the realm of sensor systems, the university's research facilities and seasoned professors are highly respected for their insightful analysis and direction. Furthermore well-known for its technological innovations and energetic culture is Karlsruhe, which presents lots of chances for professional development and internships.

Aspirations and Future Career Views - After earning my Master's in Sensor Systems Technology, I want to work in positions such **IoT Specialist, Embedded Systems Developer, or Sensor Systems Engineer**. Helping the creation of smart technology enhancing quality of life especially interests me. Using Germany's great technology scene and innovative atmosphere, I hope to work. This program will provide me the tools and expertise required to flourish in these positions and significantly advance the field of sensor systems.

Eventually - I am so sure that the Master of Science in Sensor Systems Technology at HS Karlsruhe will equip me to reach my professional objectives. Participating in the academic community at HS Karlsruhe excites me to maximize the chances it presents. Contributing to the field of sensor systems excites me as both personally and professionally developing in Germany grows. I value your giving my application some thought.

Sincerely
Meghana, Manjegowda
