

Motivational Letter

As an Indian student, I am **Riyasarah, Abraham** writing to convey my interest and desire for **Master of Control, Microsystems, Microelectronics (CMM) at University of Bremen**. The possibilities of electronics and communication technology to change our planet have always captivated me; hence your prestigious curriculum will help me to expand my knowledge and abilities in this subject.

Completing a **German Language Level A2** course at the Goethe Institute, I **scored 86/100** to get ready for my study in Germany. Taking the **IELTS as well**, I **scored 7.5** (Reading: 7.5, Listening: 7.5, Writing: 7.5, Speaking: 7.5). I think that this language training will help me to have a more fascinating and immersed stay in Germany.

Academically, I have always been a focused learner. In my 10th Class (**German Grade: 1.50**), I **achieved 9.0 CGPA**; in my 12th Class, **German Grade: 1.99**. From APJ Abdul Kalam Technological University, Kerala, where I obtained my **Bachelor's degree in Electronics and Communication Engineering, CGPA of 7.7 (German Grade: 2.53)** Among the courses I took were Engineering Physics, Engineering Graphics, Partial Differential Equation and Complex Analysis, Design & Engineering, Mechatronics, Linear Algebra and Calculus. Over my academic path, I have proved adept in AutoCAD, Microsoft Office, and AWS Cloud.

I participated in several internships to have real-world experience while still in college. I worked at **Salesine, India, as an HR intern** and at **Aester India Pvt. LTD., Cochin**, as an embedded systems intern. I **also interned with AWS Cloud at Cougar Planet, Kerala**. Using MobileNetSSD, my bachelor project concentrated on **Sign Language and suggested a bidirectional sign language conversion combined with home automation**. These encounters have helped me to have a balanced knowledge of both theoretical and pragmatic sides of my field.

Apart from study I have attended numerous workshops, including those on **"Self-Driving Electric Vehicles"** and **"Basics of AutoCAD & SketchUp"**, by IIT Kharagpur, and have completed training in **"Voice of Customer"(VOC)** through the Kerala Development and Innovation Strategic Council. I have actively involved in creative activities like writing, blogging, and content creation. I always dedicate time to volunteer work, showcasing my commitment to contributing to the community

I have also taken advantage of many extracurricular events and seminars. Among these are some:

- Department of Electrical and Electronics Engineering at Mar Baselios Christian College Engineering & Technology's **National Level idea presentation competition** helping SAINTGITS College of Engineering as subhead for NAKSHATRA 2022.
- Engaging in Trecento, part of which is **CHRONICLE, live journal writing**, under dotted community.
- Participating in webinar events on **Creative Design and Automotive Industry** by SAE TKMCE and Empowering Women in Technology by Christ College of Engineering.

Studying Control, Microsystems, Microelectronics (CMM) drives me from personal experience gained during my internship at Aester India Pvt. Ltd. working on embedded systems, I came to see how microsystems may transform sectors ranging from healthcare to automation. This encounter sparked my enthusiasm to investigate the field of microelectronics more broadly. Modules like "Advanced Control Systems" and "Microelectronics Design," which will provide me the technical knowledge and ability to handle practical problems, especially thrill me. Studying CMM at the University of Bremen will, in my opinion, give me both technical knowledge and interpersonal skills—qualities important for my career development.

The University of Bremen appealed to me because of its great reputation and dedication to first-rate instruction. Ranked among the best universities in the world, the university provides a lively student body totaling more than 19,000 individuals. The University of Bremen boasts first-rate facilities and academic members that create a suitable setting for research and learning. Though I do not know anyone personally at the university, alumni have given me great comments, which have cemented my choice even more. Bremen is a great destination for my academic and professional goals as, as a city, it presents a rich cultural experience and lots of employment for recent graduates in firms like Airbus, ATLAS ELEKTRONIK, and OHB SE.

Germany's famous educational system and chance to get a worldwide learning experience motivate me to study there. Since the field education compared is considerably better than elsewhere, I wish to remain in Germany. I wish to personally enjoy the fantastic exposure, variety, and German culture. Germany's qualitative education, practically oriented teaching approach, and welcoming surroundings make it the country I would like to study master's degree in. Studying in Germany helps me to develop both personally and professionally. Germany's rich history, creative energy, and cultural diversity—which have greatly shaped my choice to study there—have me totally engrossed.

After earning my Master of Control, Microsystems, Microelectronics (CMM), I hope to be a **Microsystems Specialist, Microelectronics Designer, or Control Systems Engineer**. I want to help to bring forward technological developments that could increase sectors and quality of living. Working appeals especially to me since the employment market for these disciplines is strong and active. Reaching my professional objectives will depend much on the knowledge and abilities I pick up from this program.

Ultimately, I think that reaching my objectives will depend much on a chance to study MS in Control, Microsystems, and Microelectronics (CMM) at the University of Bremen. I am sure that my academic background, real-world knowledge, and love of this field qualify me for your program. I am hoping to get the chance to continue my graduate work at your prestigious university.

I value your giving my application some thought.

Riyasarah, Abraham
