

Statement of Purpose

I go by **Sahana Sridhara, Murthy**. I'm writing to say how much I would like to study at **TU Kaiserslautern a Master of Science in Computer Science**. My professional experience and academic background have adequately equipped me for the demands and possibilities in this field; so, I am enthusiastic to keep on my education at your prestigious university.

I proved my language ability by finishing sixteen years of English education. Currently having a **Bachelor of Engineering in Electronics and Communication Engineering** from Visvesvaraya Technological University in Belagavi, India, with a **CGPA of 7.53—equivalent to a German grade of 2.23**—I Among my courses were Engineering Chemistry, Engineering Graphics, Digital System Design, Signals & Systems, Microcontrollers, and Technological Innovation Management & Entrepreneurship. For next computer science research, these disciplines have given a strong basis.

Apart from my intellectual activities, internships have given me real-world experience. Working as **an intern at nuVizz Software Solutions Pvt. LTD.**, I helped test mobile and web apps for the nuDeliverit project. Supply chains, transportation, SAAS technologies, networking (CCNA), Python automation, Kubernetes, Linux, Selenium, and automation testing were among the areas I learned about. Most lately, **Cisco Systems, India** has me working as a **Software Test Engineer (Apprentice)**. Among my duties are system tests, tests on 4G and 5G calling models, and Python automated scripting development. These encounters have given me essential understanding of the useful sides of computer science.

Apart from my education and work experience, I have actively looked for chances to broaden my knowledge. Developing a noise-resistant picture encryption system constituted the focus of my bachelor's project on **Noise Resistent Medical picture Encryption and Decryption**. Three sections comprised this project: spatial domain encryption, frequency domain encryption with DWT, and final spatial domain encryption. This project gave me improved knowledge of the working surroundings and technical abilities.

By means of a mix of theoretical and practical education, the TU Kaiserslautern program provides a thorough grasp of computer science. The structure of the program—including its courses and projects—offers a full education. That there are choices for teaching German and English is encouraging. Advanced labs and research institutes among TU Kaiserslautern's facilities foster creativity and learning. Particularly intriguing are the university's many industry relations and placement possibilities since they provide practical knowledge and raise employability.

The possibilities of computer science to address practical challenges have always captivated me. A family event where I saw how technology may enhance healthcare piqued my curiosity in this industry. My enthusiasm for computer science grew even more driven by my bachelor's research on noise-resistant medical image encryption and decoding. Your program's offerings of modules in artificial intelligence, data science, and cybersecurity really appeal to me. These classes will give me the technical knowledge and interpersonal skills required to thrive in this always changing sector. This program will advance my career prospects and personal growth by arming me for roles **including Software Developer, Data Scientist, and Cybersecurity Analyst**.

Germany's great economy and first-rate educational system have me wanting to study there. To help me to better grasp German, I would like to learn about the many civilizations. Using the financial tools at hand for students—such as scholarships and reasonable tuition—allows me to benefit. After graduation, I wish to take advantage of Germany's robust employment market and great need for qualified experts. Studying in Germany will enable me to develop both personally and professionally by arming me with the tools and information I need to advance in my employment.

Together with my skills and expertise, the approaches and technologies provided at TU Kaiserslautern will surely help me to reach my goals and favorably affect the field of computer science. The prospect of still learning at TU Kaiserslautern and helping to produce creative ideas excites me much.

I value your giving my application some thought.

**Actually,
Sahana Sridhara, Murthy**
