

Letter of Inspired Motivation

Introduction - Having a strong academic foundation and practical knowledge in electronics and communication engineering, I am **Sahana Sridhara, Murthy** a committed and results-oriented person. It gives me great pleasure to show my desire to work at the **University of Bremen on a Master's degree in Communications and Information Technology**. This letter helps to sum up my credentials, goals for this program, and objectives.

Competencies - Visvesvaraya Technological University, Belagavi, India, saw me graduate with a great **CGPA of 7.53 (German Grade: 2.23)** after completing my **Bachelor of Engineering in Electronics and Communication Engineering**. During my academic career, I worked on a major project proposing a noise-resistant image encryption system on **Noise Resistant Medical Image Encryption and Decryption**. Three portions comprised this project; the center was dedicated to frequency domain encryption using DWT.

Following graduation, I started working with **Cisco Systems, India as a Software Test Engineer (Apprentice)**. Among my duties are system tests, tests on 4G and 5G calling models, and Python automated scripting development. Working on testing web and mobile apps for the nuDeliverit project and acquiring experience in supply chain, transportation, SAAS technologies, networking, CCNA, Python automation, Kubernetes, Linux, Selenium, and automation testing, my **internship at nuVizz Software Solutions Pvt. LTD.** gave me insightful knowledge as well.

Germany Why - Applying to Germany is important to me since I think quality education, research, and innovation are given great importance. Growing personally and professionally in a nation with a vibrant academic scene supporting knowledge application and intellectual development is what I aim for. Germany's robust economy and leadership in the industrial and technology domains inspire me to study there. Experiencing Germany's cosmopolitan environment will help me grow generally more holistically. The excellent levels of education in Germany are significantly superior than those of other countries, hence I would wish to profit from them. German culture, which is renowned for its efficiency, accuracy, and rich legacy, is something I wish to really absorb.

Why information technology and communications - During my bachelor's degree, I grew fascinated with information technology and communications. The courses I took, including Microcontrollers, Digital System Design, and Signals & Systems, piqued my interest on the way data is handled and transferred. Working on testing and automation—two key components of communications technology—my experience at Cisco Systems confirmed my passion even more I became aware of the need of dependable communication systems after a family event where we encountered problems during a medical emergency. This event inspired me to seek a job where I might help to advance technology of communication. The University of Bremen's Communications and Information Technology programme will equip me with the technical knowledge and interpersonal skills required to succeed in this sector. Modules like Advanced Communication Systems and Network Security especially fascinate me since they relate to my professional goals.

Particularly this university - Why - Being among the best universities in Germany, the University of Bremen appeals to me for study since it is well-known for its outstanding education and strong research concentration. Along with enjoying its first-rate facilities and knowledgeable staff, I wish to be a part of its varied student body—which numbers over 20,000 people. My choice has been much impacted by the pleasant experiences and development of a buddy who attended the University of Bremen. The university's research programs and chance to collaborate with eminent professors who are authorities in their domains really appeal to me. Attractive too is the city of Bremen, with its rich past and active culture. Investigating the city's attractions—such as the old Schnoor area and the Bremen Town Musicians monument—piques my curiosity. Furthermore, Bremen's local employment scene presents great chances for graduates in information technology and communications thanks to corporations like Airbus and Siemens. Attending the University of Bremen will afford me intellectual, personal, and professional advantages that will help to define my future.

Future Viewpoints for Employment - After graduation, I want to be a **Network Security Analyst or a Communications Engineer**. The program in Communications and Information Technology will allow me the chance to acquire the required knowledge and abilities to succeed in these positions. I want to work since this field is in great demand there. The curriculum will expose me to the most recent developments in communications technology and offer practical experience, therefore preparing me for a successful future. I think the program at the University of Bremen will provide me the means to have a major influence in the field.

In summary - Ultimately, I am sure that working for a Master's degree in Communications and Information Technology at the University of Bremen will significantly forward my career. I want to help the field and develop personally and professionally. I want you to consider this application and give me the ideal stage to reach my professional objectives.

Respectfully,
Sahana Sridhara, Murthy
