

Statement of Purpose

Although I obtained a Bachelor of Technology in Information Technology, my passion has always been artificial intelligence. My name is **Ajay Singh, Dhillon**. I am writing to convey my great interest in **the Master of Artificial Intelligence program at FAU Erlangen** because of this passion as well as a wish to help to shape technical developments.

Starting with a good basis in secondary education, where I obtained a noteworthy **9.0 CGPA (German equivalent: 1.5)** on the Secondary School Examination (10th Class) run by the Central Board of Secondary Education (CBSE), Delhi, India. Maintaining this trend in my Senior Secondary education (CBSE 12th Class), I **scored 88.4% (German equivalent: 1.5)** in May 2019. After completing my secondary education, I worked on a **Bachelor of Technology in Information Technology** at Guru Gobind Singh Indraprastha University, Delhi, India, graduating in March 2024 with a very outstanding **CGPA of 9.43 (German equivalent: 1.2.)**. This curriculum taught me about many programming languages, algorithms, and the foundations of artificial intelligence.

Through internships, I intentionally sought out real-world experience to balance my academic background. Through a **one-month front-end development internship** at **Technoboot Pvt. LTD.**, I gained insightful knowledge of practical uses for my technical abilities. Further extending my knowledge of artificial intelligence and project management is my completion of various technical courses including **"Introduction to Artificial Intelligence"** and **"Agile Project Management"** from Coursera. To improve my programming, I also finished courses on **Data Structures and Introduction to C++ from Coding Ninjas**. Understanding the value of user interfaces in software development came from my six-week online React by Internshala Trainings participation.

The ability of artificial intelligence to tackle challenging issues and enhance quality of life intrigues me always. A family event when a member was diagnosed with an illness that could have been discovered sooner with improved diagnostic tools further piqued my curiosity in artificial intelligence. This personal narrative let me see the great possibilities artificial intelligence offers for the medical field. My ambition to work in this industry was further confirmed when I worked on a project involving artificial intelligence to enhance customer experience at Technoboot Pvt. Ltd. Because they will equip me with the technical knowledge and abilities required to succeed in the field of artificial intelligence, I wish to study modules including "Machine Learning," "Natural Language Processing," and "Computer Vision". This training will not only advance me professionally but also enable me to develop personally by pushing me to address practical issues and apply critical thinking.

FAU Erlangen's great standing in computer science and engineering led me to apply there. Reflecting its dedication to excellence, FAU Erlangen is placed among the top 200 universities worldwide according to the QS World University Rankings. Having more than 39,000 students, the university presents a rich and varied community that I think will improve my educational process. The university's modern facilities, seasoned professors, and Erlangen's strategic location help me to pursue my studies here. Though I have no personal ties at FAU Erlangen, I have heard great comments from former students about the university's great academic resources and encouraging surroundings. The existence of recognized research facilities and experts in artificial intelligence shaped my application choice even further. Erlangen is a great destination to live and study since it provides the ideal mix of history and modern conveniences and rich cultural legacy. Erlangen's local employment scene is also booming, with corporations like Siemens and Adidas presenting lots of chances for recent graduates in artificial intelligence.

Germany's top-notch educational system and strong focus on research and development appeal to me as a study location. I want to remain since, compared to other countries, the field of artificial intelligence is very developed here. The good exposure, variety, and rich German culture I will be surrounded with while studying in Germany excites me. Germany appealed to me for my Master's degree due of its outstanding academic standards, reasonably priced tuition, and close ties to businesses. By arming me with the information and abilities required to succeed in the field of artificial intelligence, studying in Germany will help me develop both personally and professionally. Germany's cooperative research atmosphere appeals especially to me since it supports critical thinking and creativity. The nation's great emphasis on useful uses of artificial intelligence in manufacturing, automotive, and healthcare as well as other sectors fits my professional goals.

After finishing my Master's degree, I want to be employed in professional roles such **data scientist, machine learning engineer, or artificial intelligence research scientist**. Want to work, where AI experts abound in both established businesses and startups, really interests me. This curriculum will equip me with the information and abilities needed for a successful career in artificial intelligence, so enabling me to help to create intelligent systems capable of addressing practical issues.

Finally, because of my solid academic background, professional experience, and love of artificial intelligence, I think I would be a great candidate for FAU Erlangen's Master in Artificial Intelligence program. This curriculum will, I am sure, equip me with the information and abilities required to reach my professional objectives. The chance to study at FAU Erlangen excites me, as does the possibility to add to the active academic community of the university. I value your giving my application some thought.

Respectfully,
Ajay Singh, Dhillon
