

Motivation Letter

I am **Ajay Singh, Dhillon**, an Indian national. I'm writing to show **FAU Erlangen's Master of Science in Data Science program** interests me. Having a solid academic foundation and a love of data science, I think this program will enable me to reach my professional objectives and significantly advance the area.

Starting with a good basis in secondary education, where I obtained a noteworthy **9.0 CGPA (German equivalent: 1.5)** on the Secondary School Examination (10th Class) run by the Central Board of Secondary Education (CBSE), Delhi, India. Maintaining this trend in my Senior Secondary education (CBSE 12th Class), I **scored 88.4% (German equivalent: 1.5)** in May 2019. After completing my secondary education, I worked on a **Bachelor of Technology in Information Technology** at Guru Gobind Singh Indraprastha University, Delhi, India, graduating in March 2024 with a very outstanding **CGPA of 9.43 (German equivalent: 1.2.)**. This curriculum taught me about many programming languages, algorithms, and the foundations of artificial intelligence.

Through internships, I intentionally sought out real-world experience to balance my academic background. Through a **one-month front-end development internship** at **Technoboot Pvt. LTD.**, I gained insightful knowledge of practical uses for my technical abilities. Further extending my knowledge of artificial intelligence and project management is my completion of various technical courses including **"Introduction to Artificial Intelligence"** and **"Agile Project Management"** from Coursera. To improve my programming, I also finished courses on **Data Structures and Introduction to C++ from Coding Ninjas**. Understanding the value of user interfaces in software development came from my six-week online React by Internshala Trainings participation.

During my undergraduate studies, especially when I worked on a project examining vast datasets to find trends and patterns, my passion in data science started. This effort piqued my interest about how data science may be used to address practical issues. The M.Sc Data Science programme at FAU Erlangen offers courses including Machine Learning, Data Mining, and Big Data Analytics, which will equip me both theoretically and practically. The chance to learn from seasoned professors in domains of expertise excites me most. The emphasis of the curriculum on research will also enable me to work on creative ideas and support the most recent advancements in data science.

Ranked among the best colleges in the world, FAU Erlangen enjoys a well-known academic reputation. The university provides modern facilities supporting a good study environment and boasts a varied student population. Friends who have attended FAU Erlangen have given me good comments, which has swayed my application choice. Important considerations in my decision also include the research facilities and seasoned data science experts housed at the university. Erlangen is also a lively city with lots of attractions and a strong cultural legacy that would be perfect for both living and study. Major benefits for my professional development include companies in the city, such Siemens and Adidas, which provide graduates great employment possibilities.

Germany's great educational system and high caliber of its colleges inspire me to desire to study here. The field of education in Germany is significantly better than in other countries, hence I wish to remain here. Experiencing Germany's varied and diverse culture will help me to see from a different angle. Germany's great focus on research and invention makes it the country I wish to study master's degree in. Studying in Germany presents many chances for networking and professional development, therefore I hope to grow personally as well as professionally. Studying here has been much affected by my desire to fully experience the German culture, which promotes accuracy, efficiency, and excellence.

Using my background in data science will help me to land a senior job where I will oversee initiatives enhancing corporate operations and stimulate creativity. Long term, I want to become a top data science specialist helping to support innovative research and development initiatives. By occupying a major role at an international tech business or in academia, I see myself significantly advancing data science technologies. Want to work, where I can help the nation's booming tech sector and gain from its strong employment market, also appeals to me.

Participating in FAU Erlangen's vibrant academic community and profiting from its first-rate resources and assistance excites me. I have no doubt that this program will give me the tools and basis I need to reach my data science career objectives. My love in data science, together with FAU Erlangen's extensive course and research possibilities, make me a perfect fit for this degree. Contributing to the academic atmosphere of the university and developing both personally and professionally there excites me.

I value your giving my application some thought. The chance to both learn from and help the prestigious FAU Erlangen community excites me.

Sincerely,
Ajay Singh, Dhillon
