

Statement of Purpose

Ajay Singh, Dhillon here is writing to say how really interested I am in earning a **Master's degree in Information Technology at Frankfurt University of Applied Science**. Having a strong academic background in Information Technology and a love of programming and artificial intelligence, I am keen to expand my knowledge and add to the developing field of information technology.

Starting with a good basis in secondary education, where I obtained a noteworthy **9.0 CGPA (German equivalent: 1.5)** on the Secondary School Examination (10th Class) run by the Central Board of Secondary Education (CBSE), Delhi, India. Maintaining this trend in my Senior Secondary education (CBSE 12th Class), I **scored 88.4% (German equivalent: 1.5)** in May 2019. After completing my secondary education, I worked on a **Bachelor of Technology in Information Technology** at Guru Gobind Singh Indraprastha University, Delhi, India, graduating in March 2024 with a very outstanding **CGPA of 9.43 (German equivalent: 1.2.)**. This curriculum taught me about many programming languages, algorithms, and the foundations of artificial intelligence.

Through internships, I intentionally sought out real-world experience to balance my academic background. Through a **one-month front-end development internship** at **Technoboot Pvt. LTD.**, I gained insightful knowledge of practical uses for my technical abilities. Further extending my knowledge of artificial intelligence and project management is my completion of various technical courses including **"Introduction to Artificial Intelligence"** and **"Agile Project Management"** from Coursera. To improve my programming, I also finished courses on **Data Structures and Introduction to C++ from Coding Ninjas**. Understanding the value of user interfaces in software development came from my six-week online React by Internshala Trainings participation.

The Master's degree in Information Technology at Frankfurt University of Applied Science particularly appeals to me because of its extensive course covering both theoretical foundations and useful applications. During my bachelor's studies, especially through courses like Java Programming and Artificial Intelligence, my interest in artificial intelligence first piqued. One unforgettable experience was creating a chatbot for a class project that inspired me to keep researching artificial intelligence. Two major motivating elements for me are the chance to work with seasoned faculty members and interact with research in artificial intelligence. The university's emphasis on industry cooperation and real-world training excites me as well since it will give me invaluable practical experience ready for the demands of the tech-driven society.

Selecting Frankfurt University of Applied Science was a well-informed choice motivated by its outstanding research and invention reputation. My intellectual and career objectives align with the university's dedication to foster academic development and curiosity. With more than 15,000 students, the active student community, and the modern university facilities will help to create a whole learning experience that will enable me to flourish personally and intellectually. The university's position in Frankfurt, a center for finance and technology, also presents lots of chances for professional development and networking.

Germany's robust economy and leading influence in technological innovation appeal to me as a study location. Germany is where I wish to stay as the field of education here is much superior. I wish to be among the rich German culture, diversity, and good exposure. Germany presents a special mix of excellent education, practical training, and a multicultural setting that is why I wish to pick it for my master's degree. Engaging many points of view and creative ideas will help me grow both personally and professionally. Germany's rich past, contributions to science and technology, and dedication to sustainability and innovation particularly pique my curiosity.

My future professional goals call for positions like **IT consultant, artificial intelligence specialist, or data analyst**. Germany is home to many top IT businesses and research institutes; hence I want to work in same industry. The Master of Information Technology program will give me the chance to contribute to the sector and land in these professional roles. The knowledge and abilities acquired from this degree will surely enable me to reach my professional objectives and significantly contribute to the field of information technology.

Ultimately, I am sure that Frankfurt University of Applied Science's Master's degree in Information Technology will provide me the ideal stage to progress my knowledge and abilities. Learning from eminent instructors and fellow students, I am excited to offer my academic knowledge and professional skills to the university community. I truly want to be granted the chance to participate in this esteemed program and am sure that my excitement and commitment will be much appreciated by the university.

Sincerely,
Ajay Singh, Dhillon
