

Statement of Purpose

Ajay Singh, Dhillon here is writing to show my interest in the prestigious **Heidelberg University's Data and Computer Science** programme. I have a solid information technology academic background and a great enthusiasm for knowing how computers and data could address practical issues. Early on in my career, I started down this path and have developed this passion by means of several academic and professional encounters. With its outstanding reputation and resources, Heidelberg University seems to be the ideal venue for me to advance my studies and career goals.

Starting with a good basis in secondary education, where I obtained a noteworthy **9.0 CGPA (German equivalent: 1.5)** on the Secondary School Examination (10th Class) run by the Central Board of Secondary Education (CBSE), Delhi, India. Maintaining this trend in my Senior Secondary education (CBSE 12th Class), I **scored 88.4% (German equivalent: 1.5)** in May 2019. After completing my secondary education, I worked on a **Bachelor of Technology in Information Technology** at Guru Gobind Singh Indraprastha University, Delhi, India, graduating in March 2024 with a very outstanding **CGPA of 9.43 (German equivalent: 1.2.)**. This curriculum taught me about many programming languages, algorithms, and the foundations of artificial intelligence.

Through internships, I intentionally sought out real-world experience to balance my academic background. Through a **one-month front-end development internship** at **Technoboot Pvt. LTD.**, I gained insightful knowledge of practical uses for my technical abilities. Further extending my knowledge of artificial intelligence and project management is my completion of various technical courses including **"Introduction to Artificial Intelligence"** and **"Agile Project Management"** from Coursera. To improve my programming, I also finished courses on **Data Structures and Introduction to C++ from Coding Ninjas**. Understanding the value of user interfaces in software development came from my six-week online React by Internshala Trainings participation.

My passion in statistics and computer science has evolved greatly over the years, hence I wish to study this field. One major turning point came during my internship at Technoboot Pvt. LTD., where I saw how powerfully data-driven decision-making may change companies. Program courses like Machine Learning, Big Data Analytics, and Data Mining especially thrill me. These disciplines will give me the technical knowledge and interpersonal skills required to succeed in this sector; they closely link to my past education and experiences. Investigating these subjects more and using the information to tackle challenging situations excites me greatly.

Among respected universities worldwide is Heidelberg University. In the QS World University Rankings, it comes third in Germany and sixty-four worldwide. With more than 30,000 students, the institution presents modern facilities and a lively campus life. Heidelberg's faculty is renowned for their knowledge, hence the multidisciplinary style of education makes this excellent location for me to achieve my intellectual objectives. The university's position in Heidelberg, a city with great cultural value and historical legacy, contributes to its appeal. Having a buddy who studies in Heidelberg, their encouraging experiences have strengthened my will to apply.

Germany's strong focus on great education and research drew me in when applying. Germany is where I wish to study, the subject of data and computer science is quite developed here. The good exposure, variety, and rich German culture excite me. Studying in Germany will assist me to develop personally and professionally. The nation's dedication to creativity and technical development fits exactly my job objectives. Germany's cooperative academic scene and first-rate facilities also make it a perfect location for learning this field.

Following degree completion, I hope to be a **Data Scientist or a Machine Learning Engineer**. Data-driven solutions can have a big influence in sectors like healthcare, finance, and technology, hence I want to help those fields. Working in particularly interests me since many of the top corporations in these sectors call that nation home. I feel myself most suited in positions including Data Analyst, Software Developer, and IT Consultant. Heidelberg University's program will equip me with the tools and knowledge required to succeed in these jobs as well as get me ready for a great career.

In conclusion, my academic achievements, practical experiences, and strong determination make me an ideal candidate for the Data and Computer Science program at Heidelberg University. Immersion in this demanding and fulfilling academic environment where I can help to progress technology and pick the knowledge required for my future employment excites me.

Sincerely,
Ajay Singh, Dhillon
