

Statement of Purpose

This letter captures my sincere desire to apply to the **University of Bonn's Master of Computer Science program**. My love in computer science and data-driven decision-making has grown following my Bachelor of Technology in Information Technology at Guru Gobind Singh Indraprastha University. I also have background working for Technoboot Pvt. Ltd. as an intern in front-end development. Since computer science is continually changing, I think your curriculum is the ideal approach for me to keep learning and acquire the tools I need to be very valuable.

Starting with a good basis in secondary education, where I obtained a noteworthy **9.0 CGPA (German equivalent: 1.5)** on the Secondary School Examination (10th Class) run by the Central Board of Secondary Education (CBSE), Delhi, India. Maintaining this trend in my Senior Secondary education (CBSE 12th Class), I **scored 88.4% (German equivalent: 1.5)** in May 2019. After completing my secondary education, I worked on a **Bachelor of Technology in Information Technology** at Guru Gobind Singh Indraprastha University, Delhi, India, graduating in March 2024 with a very outstanding **CGPA of 9.43 (German equivalent: 1.2.)**. This curriculum taught me about many programming languages, algorithms, and the foundations of artificial intelligence.

Through internships, I intentionally sought out real-world experience to balance my academic background. Through a **one-month front-end development internship** at **Technoboot Pvt. LTD.**, I gained insightful knowledge of practical uses for my technical abilities. Further extending my knowledge of artificial intelligence and project management is my completion of various technical courses including **"Introduction to Artificial Intelligence"** and **"Agile Project Management"** from Coursera. To improve my programming, I also finished courses on **Data Structures and Introduction to C++ from Coding Ninjas**. Understanding the value of user interfaces in software development came from my six-week online React by Internshala Trainings participation.

The University of Bonn stands especially out to me because of its creative teaching strategies and emphasis on practical application. For a master's degree, the contemporary facilities and multidisciplinary learning atmosphere fully meet my needs. Moreover, I find resonance in the university's commitment to establish a collaborative learning environment whereby students are urged to think critically and collaborate on creative ideas as well as in my own learning philosophy. Engaging with colleagues and experts from many backgrounds fascinates me since I think it will tremendously improve my educational process.

Germany is the finest place for computer science graduate courses since it leads in invention and technology globally. Germany's robust economy and focus on research and development—which provide a good environment for future computer scientists like myself—have me wanting to study there. Germany is where I want to stay as the field education there is much better than elsewhere. I wish to be among the rich German culture, diversity, and good exposure. Studying in Germany will enable me to develop personally and professionally equally. I respect Germany's emphasis on education and friendly environment it offers for foreign students.

Working with and developing within the Computer Science program of the University of Bonn excites me. The knowledge and abilities this program will provide will help me to reach my career goals and significantly influence the computer science sector. Since I really want to succeed in this program and help the academic community of the university, I humbly ask that the admissions committee give my application some attention.

I want to work in positions such **Systems Analyst, Software Developer, or Data Scientist** in my next job. The University of Bonn's Computer Science degree will give me a good basis in both technical knowledge and interpersonal abilities, so enabling me to work in these roles. With my prior experiences sharpening my ability to evaluate business requirements and transform them into practical insights, I intend to improve still another capacity: I also hope to work, using the robust computer science employment market there.

At last, I would want to express that the idea of attending the University of Bonn and starting this amazing road of learning excites me. My experience, knowledge, and love of computer science, in my opinion, qualify me perfectly for this program. Sharing with the university community my abundance of knowledge and love of computer science excites me. I value your giving my application some thought.

Sincerely,
Ajay Singh, Dhillon
