

Letter of Motivation

Ajay Singh, Dhillon is my complete name, and I respectfully want to apply to the **University of Freiburg for a Master of Science in Computer Science**. Having a strong academic background in information technology and pertinent experience in front-end programming and artificial intelligence, I am motivated and eager to further my knowledge in this subject by means of the respected curriculum your university offers.

Starting with a good basis in secondary education, where I obtained a noteworthy **9.0 CGPA (German equivalent: 1.5)** on the Secondary School Examination (10th Class) run by the Central Board of Secondary Education (CBSE), Delhi, India. Maintaining this trend in my Senior Secondary education (CBSE 12th Class), I **scored 88.4% (German equivalent: 1.5)** in May 2019. After completing my secondary education, I worked on a **Bachelor of Technology in Information Technology** at Guru Gobind Singh Indraprastha University, Delhi, India, graduating in March 2024 with a very outstanding **CGPA of 9.43 (German equivalent: 1.2).** This curriculum taught me about many programming languages, algorithms, and the foundations of artificial intelligence.

Through internships, I intentionally sought out real-world experience to balance my academic background. Through a **one-month front-end development internship** at **Technoboot Pvt. LTD.**, I gained insightful knowledge of practical uses for my technical abilities. Further extending my knowledge of artificial intelligence and project management is my completion of various technical courses including **"Introduction to Artificial Intelligence"** and **"Agile Project Management"** from Coursera. To improve my programming, I also finished courses on **Data Structures and Introduction to C++ from Coding Ninjas**. Understanding the value of user interfaces in software development came from my six-week online React by Internshala Trainings participation.

The University of Freiburg's Master of Science in Computer Science degree appeals especially to me because of its extensive course covering topics including Data Science, Machine Learning, Cybersecurity, and more. These fields line up with my hobbies and job objectives. Through classes and internships, I became rather interested in artificial intelligence and data structures while still an undergraduate. For example, I became aware of machine learning algorithms' ability to solve challenging problems while working on a project for my internship. This encounter motivated me to learn particular skills in these domains.

The program's emphasis on both academic understanding and useful applications will help me to handle important problems in the IT domain. The chance to work on research projects and cooperate with business partners excites me especially since I think these would be priceless for my professional growth. The program appeals far more to me because of the freedom to concentrate on areas of interest right from the start of the semester.

Germany is well-known in the sector of engineering and technology, hence I would love to apply here. Since field education in Germany is significantly better than in other countries, I wish to remain here. I wish to be among the rich German culture, diversity, and good exposure. Germany's emphasis on research and innovation drives me to decide on it for my master's degree. Studying in Germany helps me to develop both personally and professionally. I wish to enjoy Germany's friendly surroundings and high caliber of instruction for overseas students. I wish to live in a cosmopolitan area and grow personally by learning from people from many backgrounds.

The University of Freiburg is among the best universities in the world, with a solid reputation for academic quality, hence I wish to study there. The campus location, professors, and amenities of the university really wow me. One of my friends who attended the University of Freiburg strongly praised the academic environment and support resources. The research institutions and teachers connected to the Computer Science program especially pique my curiosity. I would be perfect living and studying in the city since of its energetic culture and attractions. The local employment scene excites me as well since it presents many chances for recent computer science grads.

Future Job Views and Goals Following my Master's degree, I aim to work in positions including **Cybersecurity Analyst, Data Scientist, and Machine Learning Engineer**. Using the knowledge and abilities acquired from the curriculum will help me to address actual IT industry issues. I would like to support businesses raising their technology capacity and participate in creative ideas. I want to work since the IT industry there is booming. I wish to have a successful profession in the global technological industry and influence computer science positively.

Consequently, I think that completing the Master of Science in Computer Science at the University of Freiburg will help me to have the required knowledge and background to fulfill my professional goals. Participating in the academic activities of the university excites me since it allows me to learn from the originality that enhances the university. Kindly review my application; I would really value it. Starting the University of Freiburg will make me very excited.

Truly,
Ajay Singh, Dhillon
