

Motivation Letter

Applying for the **Master's in Sustainable Battery Production Engineering program at the esteemed SRH Berlin University of Applied Sciences**, I, **Arijeet, Dutta** am driven especially in the field of sustainable energy and have great desire to see the developments in battery production.

Having graduated from the National Institute of Technology, Raipur, India, with an excellent **score of 8.90 CPI (German Grade: 1.6)**, I hold **Bachelor of Technology in Electrical Engineering**. I studied basic electrical engineering, computer programming, electrical measurement and instrumentation, electrical circuit and network analysis, control system engineering, high voltage engineering, and smart grid technology undergradually. I passed my Senior School Certificate Examination (Class 12th) with a **score of 94.2% (German Grade: 1.2)** and my All India Secondary School Examination (Class 10th) with a score of **95.8% (German Grade: 1.1)**.

Over my academic career, I have attended numerous seminars and training courses including a workshop on **artificial intelligence with Deep Learning run** by Learn& Build powered by TechieNest Pvt. LTD. and training in **Catia & Ansys** from Skill Vertex. Currently employed as a **Business Technology Solutions Associate at ZS Associates India Private Limited**, my professional experience spans an ongoing position. My internships have given me a variety of experiences including **designing a low-cost compact electric car** at IIT Patna, working on **ophthalmic devices for eye-disease detection** at **NETR AI PVT. LTD**, and doing industrial robots at Mukkudal robots. Along with classes in **Robotics, Introduction to the Internet of Things and Embedded Systems, and Rocket Propulsion**, I finished technical certifications like the ThoughtSpot Professional Certification. With a **CEFR Level of C1**, my **IELTS score of 7.0** reflects my English competency.

Strong enthusiasm for renewable energy and sustainable technology as well as my goal to help solve the worldwide energy transition issues drove me to seek a Master's in Sustainable Battery Production Engineering. Particularly in the research and manufacture of sustainable, high-performance batteries, this program fits my passions in clean energy solutions and innovation. With an eye toward low environmental effect, this program will help me to enhance my knowledge of materials science, manufacturing techniques, and battery lifetime management. Moreover, I am eager to improve my analytical and problem-solving abilities, which will enable me to lead initiatives aiming at lowering the carbon footprint of battery manufacture while satisfying the growing need for energy storage systems in electric vehicles and renewable energy integration.

Germany is a pioneer in technology and innovation, hence it is the country I wish to apply in for my studies in sustainable battery manufacture. Since field education in Germany is significantly better, I wish to remain here. I wish to be among the rich German culture, diversity, and good exposure. Germany offers great chances for both personal and professional growth, hence I decided to major there. Studying in Germany will help me develop personally as much as professionally. I wish to absorb a culture that supports sustainability and technical development and learn from the top-notch educational system.

SRH Berlin University of Applied Sciences appeals especially to me because of its helpful study atmosphere and dedication to high intellectual standards. Well-documented are the university's engineering education rating and stellar reputation. Modern facilities and a varied student population let SRH Berlin provide a rich surroundings for its students. An extra benefit is Berlin, a city well-known for its active culture and creative energy. The chance to join in research institutes emphasizing sustainable energy solutions and learn from eminent experts excites me.

After finishing this top school, I intend to apply my obtained knowledge to employment in top sustainable energy companies. In firms leading the way in innovation, I hope to land positions like **Research Scientist, Energy Consultant, or Battery Production Engineer**. Working would allow me to help to create sustainable energy solutions and propel technical innovation. Supporting worldwide operations, appreciating several cultures, and promoting sustainable development in the global corporate scene are my aim.

In conclusion, this chance will not only help me to keep current with knowledge but also introduce fresh ideas to the university. Looking forward beginning this transforming path, I am sure that the knowledge and insights provided by SRH Berlin University of Applied Sciences will greatly enhance my future. I value your giving my application some thought.

With sincerity,
Arijeet, Dutta
