

Motivation Letter

Writing to propose my candidature for the **Master of Science program in Embedded Systems Engineering at the University of Freiburg**, my name is **Arijeet, Dutta**. Growing up in Bhilai, Chhattisgarh, I have always found great fascination in the countless opportunities technology presents to address practical issues. My academic and career goals have been motivated by this passion; hence, I think the University of Freiburg is the greatest place for me to keep traveling this road.

Having graduated from the National Institute of Technology, Raipur, India, with an excellent **score of 8.90 CPI (German Grade: 1.6)**, I hold **Bachelor of Technology in Electrical Engineering**. I studied basic electrical engineering, computer programming, electrical measurement and instrumentation, electrical circuit and network analysis, control system engineering, high voltage engineering, and smart grid technology undergradually. I passed my Senior School Certificate Examination (Class 12th) with a **score of 94.2% (German Grade: 1.2)** and my All India Secondary School Examination (Class 10th) with a score of **95.8% (German Grade: 1.1)**.

Over my academic career, I have attended numerous seminars and training courses including a workshop on **artificial intelligence with Deep Learning run** by Learn& Build powered by TechieNest Pvt. LTD. and training in **Catia & Ansys** from Skill Vertex. Currently employed as a **Business Technology Solutions Associate at ZS Associates India Private Limited**, my professional experience spans an ongoing position. My internships have given me a variety of experiences including **designing a low-cost compact electric car** at IIT Patna, working on **ophthalmic devices for eye-disease detection** at **NETR AI PVT. LTD**, and doing industrial robots at Mukkudal robots. Along with classes in **Robotics, Introduction to the Internet of Things and Embedded Systems, and Rocket Propulsion**, I finished technical certifications like the ThoughtSpot Professional Certification. With a **CEFR Level of C1, my IELTS score of 7.0** reflects my English competency.

Embedded systems have always captivated me, and my academic journey has stoked this passion even more. My internship project on "Ophthalmic Devices for Eye-Disease Detection" was one moment that really strengthened my will to seek a Master of Science in Embedded Systems Engineering. This project sought to create a gadget able to identify early on eye disorders, therefore addressing the growing demand for easily available healthcare treatments. The success of this research inspired me to investigate more difficult embedded systems including smart grid technologies and control systems engineering. Modules like "Advanced Embedded Systems" and "Real-Time Systems," which will equip me with the technical knowledge and practical abilities required to succeed in this sector, especially thrill me. This curriculum will not only boost my technical skills but also my problem-solving and teamwork ability, which are absolutely vital for my development both personally and professionally.

Germany is a nation with a lot of technological and engineering history; hence I like to study there. I wish to gain from the top-notch instruction and well-developed learning environment German colleges provide. Germany's cosmopolitan society appeals to me since it supports an intellectual interchange that is very vital for both personal and professional development. Germany's established industrial sector presents chances for cooperation with big companies and exposure. I wish to benefit from it. German culture, with its rich history, ingenuity, and emphasis on accuracy and quality, is one in which I wish to really engage. The education in my field is far better, hence staying in Germany will help me advance personally and professionally.

The University of Freiburg appeals especially to me because of its stellar standing in the field of embedded systems engineering. Considered among the best universities worldwide, the university boasts well-known faculty quality as well as research facilities. Modern labs and research facilities at the University of Freiburg will provide me the best chances to apply what I learn and tackle challenges as they develop. The contacts the university has with companies will be very helpful for my future employment. Furthermore, the school's location in Freiburg—a city renowned for its active culture and creativity—makes it a great environment for my studies. Further supporting my choice have come compliments from friends who have attended the University of Freiburg.

After earning my Master of Science in Embedded Systems Engineering from the University of Freiburg, I intend to be employed in roles such **IoT Developer, Control Systems Engineer, or Embedded Systems Engineer**. I think the knowledge and abilities this program will equip me for these positions and help me to actively participate in the technology sector. Working in particularly interests me since the nation presents many chances for development and creativity in the field of embedded systems. I want to be a member of a team developing answers for practical issues that enhance people's quality of living.

I have no doubt that the University of Freiburg's Master of Science in Embedded Systems Engineering program will provide me with the knowledge and abilities required for success in my line of work. The institution is the perfect venue for me to reach my academic and professional objectives with its well-coordinated curriculum, modern facilities, and solid industry linkages. The idea of attending the University of Freiburg and helping to advance embedded systems excites me.

I value that you are giving my application some thought.

**With sincerity,
Arijeet, Dutta**
