

Statement of Purpose

Driven and aspiring from India, I am **Bhavan, Baskar** seeking a **Master's degree in Data Science at UE**. Completing graduate studies at your prestigious institution will enable me to expand on the solid basis in information technology that my academic background and professional experience have given.

The **Bachelor of Technology degree in Information Technology** which I obtained from Anna University Chennai India demonstrated my commitment to academic achievement through my **8.17 CGPA (German Grade: 2.0)**. My undergraduate program consisted of Engineering Chemistry, Programming in C, Digital Principles and System Design, Operating Systems, Computer Networks, Mobile Communication, Cryptography, and Network Security to establish fundamental knowledge of computer science concepts. Before, starting my undergraduate studies, I passed the State Board of School Examinations Higher Secondary Second Year Examination (12th Class) in Tamil Nadu India. My Secondary School Leaving Certificate Public Examination (10th Class) **scores 82.8% (German Grade: 1.7)** from subjects Tamil, English, Mathematics, Science and Social Science at the same board.

I developed my technical abilities by conducting research through the project "**A 3D Steganalytic Computation and Steganalysis Safe Watermarking**." The research initiative examined ways to advance communication network security through enhanced privacy solutions in cryptographic applications. Implementing histogram canisters and Gaussian distribution models through this project enhanced data security standards, a major advancement for the cybersecurity domain. In terms of professional experience, I **interned in Python with Data Science at the National Small Industries Corporation Limited, Chennai, India** in June 2023. I gained practical experience in analyzing data, data visualization, and implementation of machine learning solutions which enhanced my knowledge of the data science processes. I have also completed several technical certifications to improve my skills in the field. I also managed to complete a certified course in **Python programming** offered by CodeChef that enhanced my programming and analytical skills. Also, I took the **Rashtrabhasha Examination in Dakshina Bharat Hindi Prachar Sabha, Madras, India** (April 2017) and got 2nd class rank, which proved my bilingual or multi-lingual skills. To further support my international studies, I have attained an **IELTS overall score of 6.5 (CEFR Level B2)**. Also, I Completed 16 years of Education in the English Language.

My desire to study data science originates from both personal and professional background. The ability of statistics to guide decisions and tackle practical issues to solve has always captivated me. Working on a project analyzing vast amounts to find trends and patterns, my internship entailed This encounter helped me to see how data science may revolutionize sectors and enhance quality of living. The courses UE offers on Machine Learning, Big Data Analytics, and Data Visualization really fascinate me. These courses will provide me with the technical knowledge and interpersonal skills required to flourish in the profession of Data Science. This program will enable me to develop personally as well as professionally as it will allow me to network with peers from all backgrounds and with specialists.

UE's strong academic reputation and active student community appeal me as the place to study. The university's standing and the active student count of more over 8,000 persons reflect its attractiveness and excellence. UE is perfect for my graduate studies because of its modern facilities, seasoned professors, and lovely campus setting. Though I have no personal links at UE, the university's great academic reputation and opportunity to live amid a dynamic community motivate me. The city where UE is situated has great historical and cultural value, which fuels even more my desire to study there. The local market's probable job opportunities thrill me as businesses appreciate UE graduates.

Long term, I want to assist creative industry solutions and improve technology using my Data Science experience. Among **Data Scientist, Machine Learning Engineer, or Research Scientist**, my ideal employment would be one of either. Working really interests me as I think the professional surroundings there will let me flourish and develop. UE's demanding academic program and research possibilities will most certainly provide me with the means to reach my objectives.

Germany is the country I wish to apply in as field education there is significantly better. I want to remain in Germany in order to expose myself, experience variety, and really become part of German culture. The nation appeals to me for my master's degree because of its reasonably priced and high caliber educational system. Studying in Germany will help me to develop personally and professionally. I really respect and want to personally experience the discipline, efficiency, and creativity connected with German society.

I appreciate your considering my application. The idea of helping UE and developing with its neighbourhood thrills me. Starting this road excites me and the chance to study at your prestigious university is much awaited.

Sincerely,
Bhavan, Baskar
