

Motivation Letter

Writing about myself as a **Master of Computer Science candidate at the prestigious University of Bonn** makes me very happy. From Velangudi, Tamil Nadu, India, I go by **Bhavan, Baskar**.

The **Bachelor of Technology degree in Information Technology** which I obtained from Anna University Chennai India demonstrated my commitment to academic achievement through my **8.17 CGPA (German Grade: 2.0)**. My undergraduate program consisted of Engineering Chemistry, Programming in C, Digital Principles and System Design, Operating Systems, Computer Networks, Mobile Communication, Cryptography, and Network Security to establish fundamental knowledge of computer science concepts. Before, starting my undergraduate studies, I passed the State Board of School Examinations Higher Secondary Second Year Examination (12th Class) in Tamil Nadu India. My Secondary School Leaving Certificate Public Examination (10th Class) **scores 82.8% (German Grade: 1.7)** from subjects Tamil, English, Mathematics, Science and Social Science at the same board.

I developed my technical abilities by conducting research through the project "**A 3D Steganalytic Computation and Steganalysis Safe Watermarking**." The research initiative examined ways to advance communication network security through enhanced privacy solutions in cryptographic applications. Implementing histogram canisters and Gaussian distribution models through this project enhanced data security standards, a major advancement for the cybersecurity domain. In terms of professional experience, I **interned in Python with Data Science at the National Small Industries Corporation Limited, Chennai, India** in June 2023. I gained practical experience in analyzing data, data visualization, and implementation of machine learning solutions which enhanced my knowledge of the data science processes. I have also completed several technical certifications to improve my skills in the field. I also managed to complete a certified course in **Python programming** offered by CodeChef that enhanced my programming and analytical skills. Also, I took the **Rashtrabhasha Examination in Dakshina Bharat Hindi Prachar Sabha, Madras, India** (April 2017) and got 2nd class rank, which proved my bilingual or multi-lingual skills. To further support my international studies, I have attained an **IELTS overall score of 6.5 (CEFR Level B2)**. Also, I Completed 16 years of Education in the English Language.

Following my bachelor's degree, I chose to join the working world in order to pick up some practical computer science skills. I managed many software projects during my career, but I discovered I lacked understanding in cybersecurity, database administration, and system compatibility especially. During my Python with Data Science internship, I came to discover how important data security is—a vital field in which I want to further my knowledge. Courses covering these key subjects abound in the Master of Computer Science degree program at the University of Bonn. Particularly pertinent to my professional objectives are modules in Advanced Database Systems, Network Security, and System Architecture. These classes will provide me both technical knowledge and interpersonal skills required for my future employment, hence I am excited to grow from them.

The University of Bonn has a well-known reputation for academic quality and is quite highly regarded. The institution has a sizable student population, including many foreign students, which will provide me a varied and fascinating encounter. The university's research initiatives really pique my curiosity, especially those involving algorithms and complexity. Leading authority in this topic worldwide is the university-affiliated Max Planck Institute for Informatics. Professors such as Prof. Dr. Bernt Schiele, who specializes in sensors and data processing, have the knowledge exactly matching my interests. For students, Bonn is the perfect location given its rich past and energetic culture. The city's closeness to research facilities and IT companies provide great chances for internships and potential job.

Germany is well-known for its strong economy, good degree of living, and solid educational system, hence I would prefer to apply there. I want to remain in Germany as the area of education there is much better. I want to be among the rich German culture, variety, and excellent exposure. Germany's globally known institutions and research-oriented attitude helped me decide on it for my Master's degree. Studying in Germany will enable me to develop personally as much as professionally. I want to fully engage myself in a nation renowned for both cultural legacy and technical innovation.

Following conversations with several former students of your program who now work as **software and data engineers**, I am certain that the Master's program at the University of Bonn provides the tools I need for both academic and practical success. I want to be employed in positions include data engineer, software developer, or IT professional. Want to work, where the IT professional employment market is booming, really interests me. The curriculum will provide me with a solid basis in computer science and practical experience via internships and projects, therefore preparing me for these professions.

Finally, I am sure that my academic and professional objectives are exactly suited for the Master of Computer Science degree offered by the University of Bonn. Contributing to and learning from the varied and vibrant community your institution boasts excites me. Computer science excites me, and I think this curriculum will provide me with the knowledge and abilities need to excel in my future employment. The chance to be a member of your prestigious university and contribute positively in the area of computer science excites me.

I value your giving my application some thought.

Sincerely,
Bhavan, Baskar
