

Motivation Letter

My name is **Bhavan, Baskar** an Indian citizen. I'm writing to say how very much I would like to study a **Master of Science in Applied Computer Science at the University of Göttingen**, Germany.

The **Bachelor of Technology degree in Information Technology** which I obtained from Anna University Chennai India demonstrated my commitment to academic achievement through my **8.17 CGPA (German Grade: 2.0)**. My undergraduate program consisted of Engineering Chemistry, Programming in C, Digital Principles and System Design, Operating Systems, Computer Networks, Mobile Communication, Cryptography, and Network Security to establish fundamental knowledge of computer science concepts. Before, starting my undergraduate studies, I passed the State Board of School Examinations Higher Secondary Second Year Examination (12th Class) in Tamil Nadu India. My Secondary School Leaving Certificate Public Examination (10th Class) **scores 82.8% (German Grade: 1.7)** from subjects Tamil, English, Mathematics, Science and Social Science at the same board.

I developed my technical abilities by conducting research through the project "**A 3D Steganalytic Computation and Steganalysis Safe Watermarking**." The research initiative examined ways to advance communication network security through enhanced privacy solutions in cryptographic applications. Implementing histogram canisters and Gaussian distribution models through this project enhanced data security standards, a major advancement for the cybersecurity domain. In terms of professional experience, I **interned in Python with Data Science at the National Small Industries Corporation Limited, Chennai, India** in June 2023. I gained practical experience in analyzing data, data visualization, and implementation of machine learning solutions which enhanced my knowledge of the data science processes. I have also completed several technical certifications to improve my skills in the field. I also managed to complete a certified course in **Python programming** offered by CodeChef that enhanced my programming and analytical skills. Also, I took the **Rashtrabhasha Examination in Dakshina Bharat Hindi Prachar Sabha, Madras, India** (April 2017) and got 2nd class rank, which proved my bilingual or multi-lingual skills. To further support my international studies, I have attained an **IELTS overall score of 6.5 (CEFR Level B2)**. Also, I Completed 16 years of Education in the English Language

Germany's concentration on research and development and its robust educational system drew me in to apply. I want to remain in Germany as the caliber of instruction in my area is far better. I want to be among the rich German culture, variety, and excellent exposure. Studying in Germany will let me develop personally and professionally. Germany's dynamic culture—known for its inventiveness, accuracy, and rich legacy—is something I want to really get into. Living and learning in Germany will, in my opinion, provide me a different viewpoint and a well-rounded education.

Moreover, the University of Göttingen stands out especially for its dedication to transdisciplinary computer science research and proven track record for academic achievement. The university's emphasis on both the academic and pragmatic sides of software development fits very well my educational background and professional objectives. Collaborating with eminent academics and peers from all backgrounds will provide an exciting classroom that supports original thought and problem-solving.

The M.Sc. program in Applied Computer Science at the University of Göttingen provides a thorough course bridging the gap between theoretical knowledge and practical application. Classes include "Advanced Algorithms," "Data Mining," and "Software Engineering," really fascinate me. These classes will provide me with the information and abilities required to excel in the globally linked technology industry. The university's dedication to excellent research and vibrant academic community also make it the perfect environment for my personal growth and career.

After I graduate, I aim to work as **software systems** professional creating and improving software solutions to solve urgent problems in many fields. I envisage myself guiding groups of people to produce creative software systems and supporting ground-breaking projects at esteemed research facilities or technology corporations. In the end, I want to use my knowledge to progress technologies and create solutions with major societal influence.

The prospect of attending the University of Göttingen and helping to add to its heritage of greatness excites me. My academic background, work experience, and love of computer science, in my opinion, qualify me well for this program. I value your giving my application some thought.

Sincerely,
Bhavan, Baskar
